

# Transmission & Distribution

## High-Powered Solutions

Michels® has built thousands of miles of transmission and distribution lines, both overhead and underground, from coast to coast.

**High-Voltage Transmission:** We utilize our extensive fleet of specialized, high-voltage equipment and trained quality workforce to skilfully, swiftly and safely build lines up to 500kV in all terrain.

**EPC Contract Models:** We offer Engineering Procurement and Construction (EPC) contract models, which allow us to leverage our experience and optimize value engineering.

**Diverse Resources:** We have the ability to self-perform all aspects of new construction, relocations and rebuilds.

**Safe, Reliable Energized Maintenance:** We are qualified to use hotstick and bare hand methods to repair energized lines, allowing you to keep your lines in service while we work on them.

**Environmental Protection:** One of our core values is: Taking pride in our reputation for quality work performed safely and with care for our environment. We embody this by supplying and installing our own wood and polymer swamp mats. Site-specific environmental plans help with threatened and endangered species compliance.

- Able to tackle difficult projects
- Efficiently work in all types of conditions
- Focus on safety
- High-quality performance
- Dependable and reliable service
